

OUR ENVIRONMENTAL BEST

At Cambria, we're committed to long term environmental responsibility

C A M B R I A[®]

Managing and minimizing our impact on the environment in both our product offerings and our daily operations is an important part of our business. As the only producer of natural quartz surfaces in the United States, Cambria offers distinct advantages in the areas of environmental health, safety and sustainability.

In a nutshell, we want our product to have a big impact on our customers . . . not our environment.

Responsible Business Practices

100% of the water in our production plants is recycled.

Recycled water from an on-site storm drainage pond is used to irrigate the grounds of the manufacturing plant.

The Department of Energy (DOE) continually works with Cambria to implement energy saving procedures at Cambria facilities.

Fleet vehicles include hybrids.

A-frame shipping crates that transport slabs and fabricated product are recycled and refurbished.

All diamond-metal tooling is retooled and re-used.

Scrap material is collected and used as road base material on local construction projects.

All computer equipment and batteries are recycled after use.

General office waste is sent for recycling (paper, plastics, ink cartridges, etc.).

Collateral & sales materials are printed on Forest Stewardship Council (FSC) certified paper.

Environmental best practices are promoted through training programs at Cambria University.

Natural Product Attributes

Natural quartz; one of the most abundant minerals on earth is twice as strong as granite lasting far longer than other countertop materials.

Nonporous and nonabsorbent resisting stains such as coffee, tea and wine.

The only quartz surface produced in the USA, resulting in lower transportation requirements. All other quartz surfacing products are manufactured primarily in the Middle East, Asia and Europe.

GREENGUARD For Children and SchoolsSM certified.

GREENGUARD Indoor Air Quality Certified[®].

Contributes to projects achieving LEED points.

Certified by NSF International (Standard 51-Food Equipment Materials) as safe for use as a food preparation surface.

Radon free.

Cambria Environmental Quartz Mining Practices

Not only does Cambria purchase its quartz primarily in North American mines, we also work with our mining partners to ensure that every step is taken to fully restore the quarry site after quartz extraction. By stabilizing the slopes of waste rock piles and reclaiming the flat surface with soil and vegetation, the site is preserved in its natural surroundings. Cambria takes pride in knowing that this commitment to environmental restoration leaves behind a large fresh-water lake teeming with fish and surrounded by the native flora and fauna.

A Cambria Countertop is Beautiful, Durable and Earth Friendly
